

ABUBAKAR SABIR

Back-End Developer | Remote · Open to Relocation (UAE / Europe)

Islamabad, Pakistan (GMT+5) | +92 334 1040447 | abubakarsabir68@gmail.com | linkedin.com/in/abubakar-sabir-582816248

Available immediately | Full-time remote or hybrid | Valid passport, ready to travel/relocate

PROFESSIONAL SUMMARY

Back-End Developer with 3+ years building fintech and e-commerce systems in .NET, Python (Django, Flask), and cloud-native microservices (Docker, Kubernetes, AWS Lambda). Delivered a 20% API response-time improvement and built event-driven backend systems using RabbitMQ, Redis, and PostgreSQL. Experienced working with distributed, cross-border teams and international clients across the US and Gulf region; comfortable in async, English-first remote environments and overlapping UAE/CET working hours.

TECHNICAL SKILLS

Languages & Frameworks: .NET Core, C#, Python (Django, Flask), Node.js, JavaScript

Architecture & Databases: Microservices, RESTful APIs, PostgreSQL, MySQL, Redis, RabbitMQ, NoSQL

DevOps & Cloud: Docker, Kubernetes, AWS (Lambda, EC2, EventBridge, DynamoDB), Jenkins, CI/CD, Linux, Git/GitLab

Testing & Tools: Selenium, Postman, Jira

Remote Collaboration: Git/GitHub, Slack, Jira, Zoom, async documentation, cross-time-zone teamwork

EXPERIENCE

Backend Developer — .NET & Microservices — AXAIN (Outsourced by Evam & Sanga) *May 2025 – Present | Remote-collaborative*

- Engineered backend microservices in .NET Core for a fintech Loan Management System (LMS) processing loans, transfers, and core financial transactions across a distributed microservices architecture.
- Built asynchronous data pipelines with scheduled jobs and RabbitMQ consumers, enabling reliable preprocessing and execution of high-volume financial transactions.
- Reduced database load and improved response latency by integrating Redis caching alongside PostgreSQL for core transaction data.
- Collaborated daily with a distributed engineering pod spanning multiple outsourcing partners, coordinating architecture reviews and performance tuning asynchronously via Git and Slack.

Backend Developer — .NET — Sanwa Systems

Oct 2023 – Apr 2025 | Islamabad

- Led backend development of a B2B e-commerce platform on ASP.NET Core, powering inventory management, order processing, and role-based access for business clients.
- Designed serverless AWS Lambda functions for conditional database operations and data storage, reducing manual processing overhead.
- Implemented CI/CD pipelines and Docker containerization on Linux, standardizing releases and cutting deployment time.
- Drove performance monitoring, debugging, and code-quality practices that improved backend reliability across releases.

Backend Developer — Spacedome

Jan 2023 – Sep 2023 | NASTP, Rawalpindi

- Built and maintained Python/Django REST APIs and microservices integrated with Flutter-based mobile applications.
- Improved API response times by 20% through query optimization and backend refactoring in collaboration with the development team.
- Strengthened reliability through code reviews, systematic bug resolution, and documentation supporting Agile delivery.

Freelance Backend / Web Developer — Self-employed — International clients (US)

Feb 2021 – May 2023

- Delivered backend and web solutions remotely for international clients, including Community Translators & Interpreters, MSB Marketing LLC, and Top Insurance Deals (all US-based).
- Managed the full remote-client lifecycle — requirements gathering, async communication, delivery, and support — earning consistent 5-star ratings.
- Configured and maintained AWS RDS-backed infrastructure on EC2 and DigitalOcean for production workloads.

DevOps Intern — Pakistan Software Export Board (PSEB)

May 2022 – Aug 2022 | Islamabad

- Administered Linux environments and managed GitLab-based CI/CD pipelines for code collaboration.

- Containerized applications with Docker and gained hands-on exposure to AWS EC2 resource management.

KEY PROJECTS

Loan Management System (LMS) — AXAIN

- Built .NET Core backend services integrated with RabbitMQ, Redis, and PostgreSQL for scalable, high-performance transaction processing across mobile, web, and USSD/SMS channels.
- Contributed to Jenkins CI/CD pipelines and deployed services to Kubernetes clusters with Harbor/Docker Hub for container management.

B2B E-commerce Platform — Sanwa Systems

- Developed ASP.NET Core backend handling inventory, order processing, custom pricing models, and bulk-order logic for business clients.

Private Cloud Cluster — Abasyn University

- Built a secure, cost-efficient OpenStack private cloud on Ubuntu servers with documentation for team knowledge sharing.

EDUCATION

Bachelor of Science in Computer Science — Abasyn University, Islamabad

2020 – 2024

Cloud Solution Architecture — Pakistan Software Export Board (PSEB), Islamabad

2022
